Technical Information

Design & Development

DYZV's design and calculation software was developed according to the calculation requirements of international and national standards of ISO76, GB4662 and ISO16281. Theoretical calculations are also used to ensure that the design static safety factor of bearing raceway is greater than the requirements of German GL certification specification.

Certifications

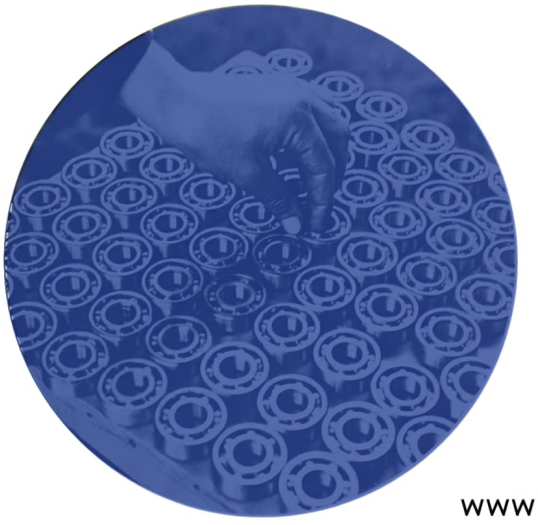

Quality Control

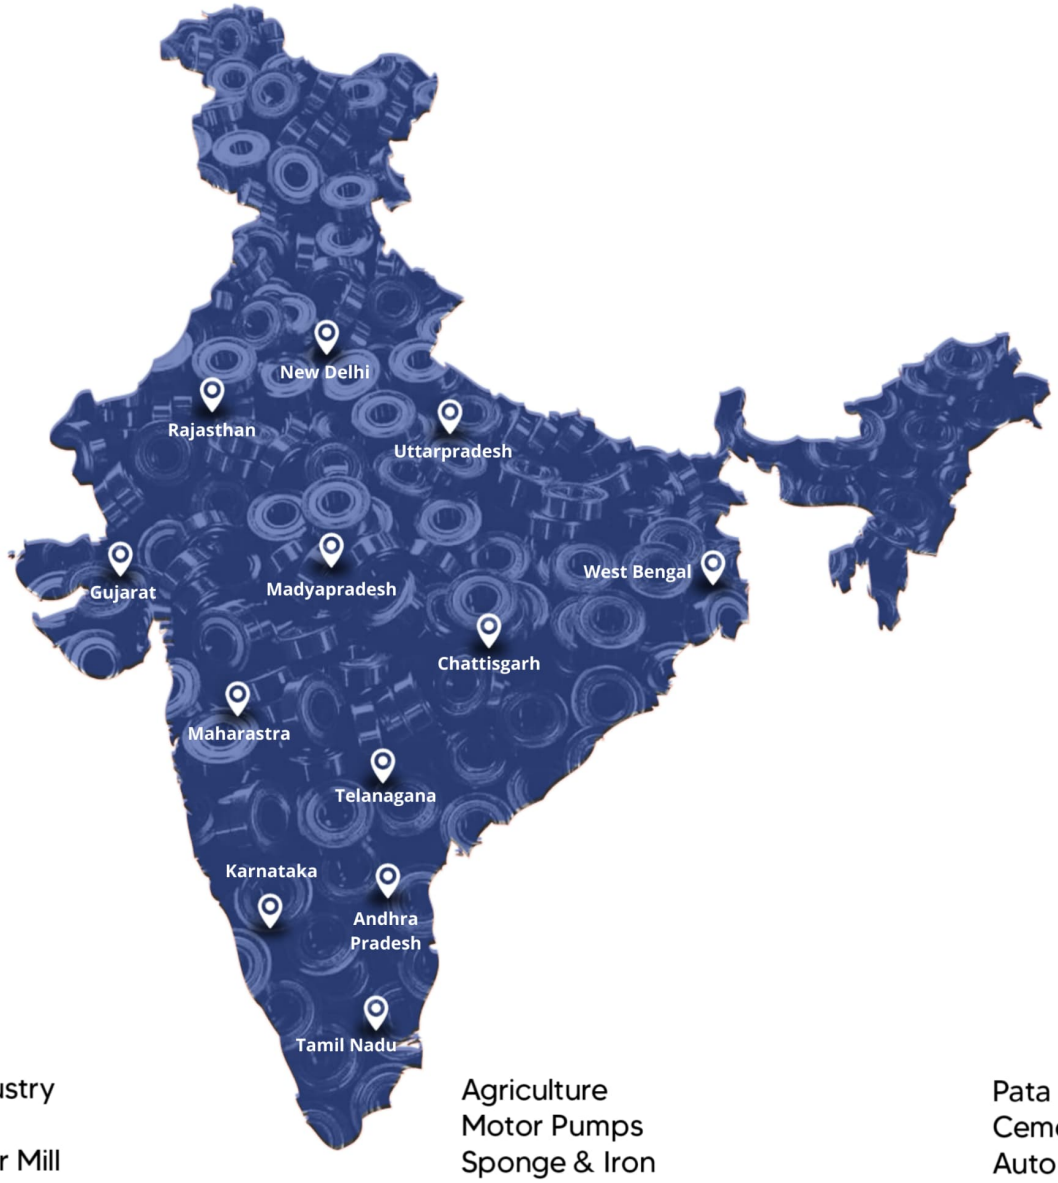

The life and reliability of bearings are directly related to the quality of raw materials used. DYZV strictly controls the purchasing channels of raw materials according to ISO 9000 and QS 9000 quality certification system standards. DYZV has multiple key testing equipments, including CMM, roughness meter, roughness profiler, pressure testing machine, impact testing machine and length measuring machine.

The company's testing and experimental centre has been approved by China National Accreditation Service for Conformity Assessment (CNAS) and Dalian Engineering Laboratory, with 9 metrological verification standards.
